OBJECTIVE EVALUATION WITH TMG

Our proprietary and patented TMG - S1 measurement system is based on tensiomyography (TMG), a scientifically validated method substantiated by more than 50 independent studies.

TMG provides relevant information about muscle contractile properties in a simple, objective, selective and non-invasive way. It gives insights into: muscle composition, muscle functional characteristics, local muscle fatigue, atrophy, muscle inhibition, spasticity, tonus, and more. High repeatability enables long term monitoring of acute and chronic changes in muscle function. As such it is an ideal tool for evaluation of functional muscle disorders.
