To Whom It May Concern:

This reference letter is provided for Redback Biotechnologies who has asked me to serve as a referee on their behalf.

I have known Danny and his team at Redback for the past three year's. As the sport science and health programme leader at ITT Dublin we have purchased a range of equipment from the company and have always found the service to be of the highest quality. Whenever problems have materialized Danny and his team at Redback have always been able to solve problems within a very short period of time. I would rate the overall customer service excellent which is evidenced by all our initially purchased VXSport devices recently replaced with newer units.

We have been users of the VXSport global positioning system for 3 years. As part of our evaluation we assessed all systems on the market and found the VX system to be of the greatest value for money. Research undertaken by us has verified the devices reliability and accuracy with an ICC of 0.9 for low speed running and 0.93 for high speed running. The ICC indicates excellent reliability and accuracy of the devices. In our assessment of other devices we identified large variations (10%) in accuracy and reliability. These findings have been substantiated by recently published research in the Journal of Sport Science by Martin Buchheit. For further information

The companies' customer service and the accuracy of the devices would make for a very good investment in the technology. I'm happy to provide further information if required.

Kind regards,
